TITLE
LAMAR TE04 MASTER CONTROL UNIT (MCU) TEST SET REVISED INSTRUCTIONS

TO
Cessna Distributors, and Single Engine Service Stations

MODELS AFFECTED
172R, 172S, 182S, 182T, T182T, 206H & T206H

DISCUSSION
The purpose of this Service Newsletter is to transmit revised instructions for the use of the Lamar TE04 MCU Test Set. Cessna and Lamar Technologies LLC, have developed P/N: LI-0021 Revision B Instructions to assist in operating the TE04 MCU Test Set for troubleshooting malfunctions or failures of the Master Control Unit (Power Junction Box) and related airframe power systems. The revised instructions are referred to in the required annual maintenance checks for the Alternator Control Unit (ACU) in the affected airplane Maintenance Manuals.

A copy of the revised instructions will be sent to all Distributors and Single Engine Service Stations. The revised instructions supersede the previous LI-0021A, LI-005B, LI-006B, LI-007, and LI-008 instructions that were previously provided with the TE04 MCU Test Sets. All new TE04 MCU Test Sets will be supplied with the LI-0021 Revision B Instructions.

Additional copies of the instructions are available from Propeller Aircraft Customer Services at 316-517-5800 or FAX 316-517-7221 for the suggested list price shown below.
