SNL89-15

TITLE

PRODUCTION CHANGE FOR AEROFICHE PUBLICATIONS

TO

Cessna Distributors, Service Stations, CPC's and Subscribers

MODELS AFFECTED

All 1946 and On Propeller Model Airplanes

DISCUSSION

A survey was recently conducted by Cessna to determine if customers were satisfied with the existing "positive" image (white background, black text) aerofiche manufacturing process.

Results of this survey, which included the mailing of a sample Supplier Service Notice Summary using a "negative" image format (black background, white text) indicated that 83% of Cessna Distributors, Service Stations, CPC's and Cessna Service Information Program Subscribers would like to see all future aerofiche publications in the negative image format. The majority of people responding to the survey indicated that negative aerofiche is easier to read, and when used in conjunction with an aerofiche reader-printer, produces a better quality paper copy.

As a result of this overwhelming response, all future aerofiche publications will be produced in the negative format.

Cessna will continue to use a reduction size of 42X which allows a standard 4-inch by 6-inch aerofiche card to contain a maximum of 288 pages of information (12 horizontal rows of 24 images each).
