MODELS AFFECTED

ALL CESSNA PROPELLER AIRPLANES, PISTON ENGINE AND PROPJET MODELS

DISCUSSION

REVISION STATUS CHECKLISTS have been developed which provide the current part number, latest revision issue and latest revision issue date for the single engine piston, multi-engine piston and propjet airplane publications listed below.

* All Cessna Maintenance/Service Manuals
* All Cessna Parts Catalogs
* All 1979 and On Serialized Pilot's Operating Handbooks
* Model 335, 402C, F406, 425 and 441 Wiring Diagram Manuals

The REVISION STATUS CHECKLISTS are a very accurate way to verify that current Cessna publications are being used; especially for customers purchasing paper publications such as maintenance/service manuals and parts catalogs since a revision notification or subscription service is not available for paper publications. The REVISION STATUS CHECKLISTS can be used to determine when a revision or reissue of a publication has been issued. The checklists also provide an excellent way to determine the currency of aerofiche publications and Pilot's Operating Handbooks.

All subscribers to the Cessna Service Information Program will receive the complete set of REVISION STATUS cards and quarterly revision service as part of their existing subscription.
Customers who would like to purchase the REVISION STATUS CHECKLISTS on a subscription basis, can do so by using the attached Revision Status Checklist Subscription order form. A subscription consists of a complete set of REVISION STATUS CHECKLISTS and quarterly revision service for one year.

The REVISION STATUS CHECKLISTS are provided on 4 inch by 6 inch paper stock and are sized to be stored in an aerofiche envelope.
